

S14d lamp holder

Assembly Instructions

Installation must be carried out by a skilled electrician in accordance with local regulations.

Preparation

1) Before any assembly, maintenance or repair work will be done, disconnect the outlet from the power supply. Unscrew the fuse or switch to "off" position! Secure against being switched back on.

2) Remove light and take off the casing by removing screws.

3) Please observe the fastening distance to permanently installed objects! Mark and drill the fastening holes. Make sure that no other cables or electrical equipment on or in the wall/ ceiling will be damaged. The mounting surface must be plane.

4) Lead the connecting cable through the cable entry opening in the base plate. Screw the base plate onto the mounting plate.

Electrical connection and commissioning

5) Connect cables. Observe order N and I.

6) Attention! lamp of protection class II. The protective earth wire (green/yellow) may not be connected and has to be insulated separately.

7) Screw the casing onto the base plate.

8) Insert S14d bulb.

9) Connect the voltage. Switch on lamp. Check that it is working properly.

Important notes

- Lamps marked with IP20 are designed exclusively for use in dry indoor rooms and may not be used in wet rooms or outdoors.
- IP20 - offers no special protection against foreign bodies and no protection against moisture.
- The mechanical or electrical design of the lamps must not be modified.
