1 TEST STANDARDS

The tests were performed according to following standards:

EN 60529:1991+A1:00 Degrees of protection provided by enclosures (IP code)

Nemko WM L0177 Nemko S.p.A. Technical Procedure

Use of measuring equipment to perform standards tests

Nemko WM L1002 Measurement Uncertainty - Policy and Statement

2 SUMMARY

GENERAL REMARKS:

The dust test was performed in a dust chamber in accordance with clauses 13.4, 13.5.2 of standard EN 60529. The water test was been performed in accordance with clauses 14.2.8 and 14.3 of EN 60529 standard (IPX8). The water test was been performed in accordance with clauses 14.2.6 and 14.3 of EN 60529 standard (IPX6).

FINAL ASSESSMENT:

The protection requirements pertaining to the technical standards and tested operation modes are

fulfilled.

The equipment under test

fulfils the protection requirements cited on page 4.

Date of receipt of test sample : 2007-06-04

Testing commenced on : 2007-06-11

Testing concluded on : 2007-06-13

2.1 Power supply system utilised

Power supply voltage : o 230V/50 Hz / 1ϕ o 115V/60Hz / 1ϕ

o 400V/50 Hz 3PE o 400V/50 Hz 3NPE

o 12 V DC

Not relevant for IP test

2.2 Short description of the Equipment under Test (EuT)

The E.U.T. is a Connector box system.

Number of tested samples: 1

Serial number:

2.3 EuT operation mode:

o - unscreened power cables

- customer specific cables

2.4 EuT configuration:

EUT was equipped with its specific cable during the tests.

Ø 8mm; Ø 12.5mm; Ø 13mm; Ø 6mm; Ø 6.3mm, one sample was tested without cables.

2.5 Performance level

The EUT complies with all the tests described on paragraph 4 point: if

- the test probe didn't penetrate inside the enclosure;
- the dust is not present inside the enclosure and on live parts after the IP6X test
- no water is present inside the enclosure and on live parts after the IPX8 test.
- no water is present inside the enclosure and on live parts after the IPX6 test.

3 TEST ENVIRONMENT

3.1 Address of the test laboratory

Nemko Spa Via Del Carroccio 4 I – 20046 Biassono MI – ITALY

3.2 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature: $17-28^{\circ}\text{C}$ Humidity: $30 \div 60\%$ Atmospheric pressure: 860-1060 hPa

3.3 Definitions of symbols used in this test report

- The black square indicates that the listed condition, standard or equipment is applicable for this report.
- The empty circle indicates that the listed condition, standard or equipment is not applicable for this report.

3.4 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report according to Nemko SpA Technical Procedure VML1002 and is documented in the quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Nemko Spa laboratory is reported:

6.2	IP Grade Protection			
6.2.1	Water Flow The measurement uncertainty is the same defined by calibration certificates, giving the table.			
		Range	Measurement Uncertainty	
		Water flow defined in EN 60529	± 2 %	
6.2.2 Dimens	Probe sion	The measurement uncertainty is the same defined by calibration certificates, giving the table.		
		Range	Measurement Uncertainty	
		Probe dimensions defined in EN 60529	± 2·10 ⁻² L _m /m	

This table has been extracted from the relevant Technical Procedure VML1002

4 TEST CONDITIONS AND RESULTS

4.1 IP 6X

Test probe diameter...... 1 mm Enclosure category 1

Volume hour...... < 40 volume for hours

4.1.2 Description of the test location

Test location: Nemko S.p.a. laboratory

4.1.3 Photo documentation of the test set-up

Typical setup for IP Dust test

4.1.4 Test result

The requirements are: Fulfilled

Test probe didn't penetrate inside the enclosure.

Dust was not present inside the enclosure and on live parts after test.

Page 8 of 12

4.2 IP X8

For the test equipment refer to par. 6

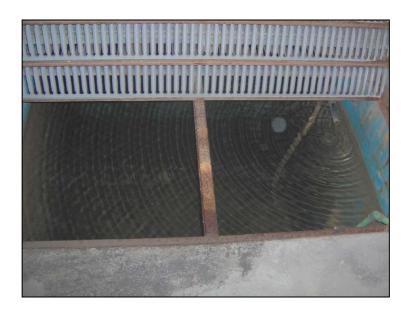

Test duration: 3 h

Depth 5m (above bottom's enclosure)

4.1.1 Description of the test location

Test location: Water IP room

4.1.2 Photo documentation the test set-up

4.1.4 Test result

The requirements are: Fulfilled

Water wasn't present inside the enclosure and on live parts after test. (see photos)

4.3 IP X6

For the test equipment refer to par. 6

Diameter of nozzle : 12,5mm
Delivery rate : 100l/min
Test duration : 3min.

Distance to nozzle to E.U.T.... from 2,5m to 3m

4.3.1 Description of the test location

Test location: Water IP room

4.3.2 Photo documentation the test set-up

Snooze for IP X6

4.3.5 Test result

The requirements are: Fulfilled

Water was not present inside the enclosure and on live parts after test.

5 <u>USED TEST EQUIPMENT</u>

Equipment used for testing are recorded and saved into the company archive as instruments 88143-2-INS.doc It will be made available if requested.

6 Finals Results:

According the EN60529 and A1 the connector models TH209 are considered IP66 and IP68 (5m).

6 PHOTOS

Configuration of sample without cable

E.u.t. general view, same equipment with different section of cable used fort he test Comply with IP66 and IP68

Internal view, after Test
